

## OBSERVATION

**Clinical indication:** Post nasal drainage.

**Comparison exam:** None.

**CT paranasal sinuses (non-contrast):** Direct axial CT exam of the paranasal sinuses was performed with multiplanar coronal reconstructions.

There is a small 5mm polyp and/or retention cyst in the anterior ethmoid air cells right side. The sinuses are otherwise well aerated. The bony elements are intact. There is mild nasoseptal deviation with minimal spurring along the left mid nasoseptal margin. The osteomeatal complex appear unremarkable. On limited imaging through the brain, there is mild frontal cortical atrophy.

## IMPRESSION

1. Small polyp and/or retention cyst right anterior ethmoid sinuses.
2. Mild nasoseptal deviation and spurring.
